

Q-SPD

Defy Maintenance
Command Performance

Q-SPD

• Advanced • Innovative • User Friendly •

Q-SPD Surface Drives are reliable high performance propulsion solutions that are user friendly and simple to install and maintain. Q-SPD offers complete usability right through the speed range, not just at high speed and there is no need for complicated operations such as trimming the propeller to enable startup and reverse. Q-SPD just does it, with swift acceleration, effortless cruise speeds and no undue stress on engines, boat or crew. The boat will track accurately and steering is responsive and precise. The advanced dynamic design of Q-SPD's main housing assures unequaled reverse performance whilst providing the perfect propeller ventilation mix at all times. Q-SPD is predictably agile at low speed whilst offering increased efficiencies and fuel savings with higher cruise and sprint speeds.

Special Housing Design

Automatically ventilates propellers for effortless acceleration.

Hi-Tech Composites

Lightweight and very strong,
- 1/2 the weight of others.

Lowest Maintenance

Virtually zero maintenance needed
year after year.

Unique Twin Rudders

For predictable, responsive
steering and superior tracking at
all speeds.

All Connections Inboard

Easy to service
and stays clean.

Highest Quality Propellers

Superior propeller designs are
100% CNC machined to better than
Class "S" standards.

Contoured Waterflow Design

For positive operation
forward and reverse.

Internal Thrust Bearing

Water cooled, oil lubricated thrust
assembly in stainless 316.
All inboard.

100kW to 2000kW

48' High Speed Boat
